DETAILED ACTION

This Office Action is responsive to Applicants Amendment – After Non-Final Rejection, filed **03/26/2008**. **Claim 1** is pending and currently amended. No new claims are presented.

Response to Amendment & Reasons for Allowance

Applicant's amendments with respect to **Claim 1** have been fully considered and are entered. The 103-prior art rejection of **Claim 1** over Zhang *et al.* and Ohashi *et al.* is withdrawn. The patentability of **Claim 1** rises and falls with the steps of synthesizing formula (3) because the synthesis of formula (5) via formulae (3) and (4) was known in the prior art at the time of following. The amendments to **Claim 1** (and the Examiner's Amendment herein) establishes that formula (2) is 1,3-dichloropropane (and not the generic formula (2), therefore excluding Y = OTs in the Ohashi reference). Zhang *et al.* and Ohashi *et al.* teach the synthesis of formula (3); however, neither uses 1,3-dichloropropane as formula (2). As mentioned above, Ohashi utilized TsO-(CH₂)₃-OTs for formula (2), which is very similar to the instant claim, but not functionally equivalent for the following reasons. Specifically, the percent yield of the reaction forming (3), shows non-obviousness. In formula (2), Y is a leaving group, and the reactivity of the leaving group decreases as Y goes from OTs, Br, to Cl. Therefore, it would be expected to have a higher percent yield in the synthesis of formula (3) if the most reactive leaving group is used, and this does not happen in this case. The least reactive leaving group (Cl) affords the highest yield. This is discussed in the Applicants post-filed publication (Imamoto *et al.* *Synthesis* **2004**, 9, 1353-1358, p. 1353; *see* IDS).

Art Unit: 1626

For this reason, there no guidance or teaching in the prior art to suggest using $Y = Cl$ because it would be expected to afford less desirable result as compared to $Y = OTs$, for example.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Randolph Smith on 5/21/2008.

The application has been amended as follows:

1. In the claims filed 03/26/2008, (page 7/14 - last page of claims and last four lines), ***after*** "n equals 1); and" and ***before*** the period, ***delete*** "wherein said step of reacting the primary phosphine represented by formula (1) with the compound represented by formula (2) includes using 1,3-dichloropropane as the compound represented by formula (2)" and ***insert*** - - wherein the compound represented by formula (2) is 1,3-dichloropropane - - .

Conclusion

Claim 1 is allowed.
